

### **Let's Face the Facts and Tell the Truth about Abortion**

"Don't look for applause, but look to obey the truth. Speaking just to find applause or to tell people what they want to hear .... is like prostitution". - Pope Benedict XVI

### **Informed Choice**

Many women make the decision to have an abortion without ever discussing either the medical procedures or the health considerations with anyone. No other surgical procedure is performed with this degree of patient ignorance.

It doesn't have to be that way.

American citizens have a right to be informed about things that might affect their health. There is no reason why any woman should go through surgery of any kind, especially induced abortion, or take powerful drugs that induce abortion, and not even be informed about potentially serious side effects.

Daniel J. Martin, M.D., Ltd., clinical instructor at St. Louis University Medical School, St. Louis, Missouri, has said, "The impact of abortion on the body of a woman who chooses abortion is great and always negative. I can think of no beneficial effect of a social abortion on a body."

Why is this so? Because induced abortion is the premature, willful, and violent penetration of a closed and safeguarded system -- a system in which nearly every cell, tissue and organ of a woman's reproductive system has been specially transformed and activated to carry out the function of sustaining and nourishing the developing child. Not surprisingly, any violation of the integrity of that system can lead to serious complications. Physical problems range from hemorrhage and infection to sterility and even death. Psychological effects range from depression and mental trauma to divorce and even suicide.

There is strong evidence that abortion increases the risk of breast cancer. A study of more than 1,800 women appearing in the Journal of the National Cancer Institute in 1994 found that overall, women having abortions increased their risk of getting breast cancer before age 45 by 50%. For women under 18 with no previous pregnancies, having an abortion after the 8th week increased the risk of breast cancer 800%. Women with a family history of breast cancer fared even worse. All 12 women participating in the study who had abortions before 18 and had a family history of breast cancer themselves got cancer before age 45.
